

Cedagravel® is a unique gravel stabilisation system that transforms loose gravel pathways and access areas into a firm gravel surface. This gravel stabiliser provides an excellent low maintenance finish that is ideal for disabled wheelchair and pushchair access to areas such as residential homes, clinics, hospitals, play schools, health centres, parks and many other applications.

The base sheet of polypropylene honeycomb being filled with gravel achieves a stabilised gravel surface. This provides an immensely strong base, which will support vehicular access (sub base needs to be increased for cars and lorries). Once the honeycomb is filled, the gravel compacts and will not spread. A top finishing layer of gravel is applied of approximately 10 - 20 mm.

Before

After

Low Maintenance

Quick and Easy Installation

Only 5-6 Cm of Gravel

SUDS Friendly, Allows Drainage

100% Porous: Reduces Flooding and Ground Water is Replenished

100% Recycled and 100% Recyclable Polypropylene

Geotextile Underside Inhibits Weed Growth: Less Herbicides

Easy Driving, No Pits, Ruts or Puddles. Ideal for Driveways

Wheelchair and Pushchair Friendly

Easy and Effortless to Walk on
